AccuSystems Windows 10 Upgrade Solution

Windows 7 Support Update

As you may know, ==Microsoft has ceased support on its Windows 7== operating system, leaving it vulnerable to security risks going forward.

As a result, AccuSystems has made the necessary investment in the ability to upgrade your V-Score System to Windows 10, so that you will have the ongoing Microsoft support that you need.

==There are two (2) Upgrade Paths available to you==, and your choice will be dictated mainly by the software and hardware that you currently have, as detailed below.

Option 1 - Upgrade from Windows 7

==If you have a compatible computer==, age and power-wise, you can upgrade to Windows 10 from Windows 7, without replacing the computer.

Requirements: Suitable computer hardware as ultimately determined by us, running a licensed copy of Windows 7, and ==you are the original purchaser of our software Version 4.4 or higher==, and you have the ability to ship your old computer to our facility.

Cost: $575.00 and your old computer, shipped to our facility for one day, with a scheduled appointment. ==(Call for details if you are not the original purchaser of our software)==.

Result: As little as one-day downtime for the machine and - with the exception of custom local networking and connectivity - plug and play ease of installation.

Option 2 - New Windows 10 Computer

If you do not have a compatible computer, age and power-wise, or you are running Score software Version 2.0, then you must buy a new computer, and a new copy of Windows 10.

Requirements: Your old computer with the Project.mdb and Machine.mdb files available, or the Project.mdb and Machine.mdb files available via email or hard-drive/USB-drive, and you are the original purchaser of our software Version 2.0

Cost: $2,985.00 + $295.00 and your old computer, shipped to our facility for one day, with a scheduled appointment (note: your old computer is not needed if you can provide the .mdb files by email/hard/USB-drive). (Call for details if you are not the original purchaser of our software).

Result: As little as one-minute downtime for the machine and - with the exception of custom local networking and connectivity - plug and play ease of installation.
